(54) VERTEBRAL BODY/INTERVERTEBRAL DISK EXCISION INSTRUMENT

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a vertebral body/intervertebral disk excision instrument capable of excising a vertebral body and an intervertebral disk together in a mass, then returning them after the hernia, etc., is excised.

SOLUTION: In this excision instrument, a wire 5 is stretched in the bottom surrounding rim of a cylindrical instrument body 2, with one end of the wire 5 fixed to the outer surrounding of the instrument body 2, the other end attached to a screw 7 by way of a spring 5a. Therefore, a vertebral body and intervertebral disk of a prescribed size can be easily and securely removed, and the hernia can be excised without fixing the intervertebral disk.

LEGAL STATUS

[Date of request for examination] 03.10.2000

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
